

The image is a promotional advertisement for FPZERO SIMULATORS. It features a first-person perspective from inside a racing simulator cockpit. A large monitor in the background displays a virtual racing track with a white car on the left and a grandstand on the right. A smaller inset monitor in the top right corner shows a different view of the track. In the foreground, a detailed racing steering wheel is visible, featuring a digital display showing '888' and a three-stripe logo. The overall aesthetic is high-tech and professional, with a dark color palette and wireframe graphics overlaid on the scene.

SIMULATORS

PROFESSIONAL GRADE SIMULATION IN YOUR HOME

FPZERO.CO.UK

Introducing the FPZERO Simulators Clubsport

FPZERO Simulators specialises in the design, development and manufacture of race car simulators for professional and amateur racing drivers, race teams and more.

The Clubsport is the perfect starting point for your simulator needs. We use a fusion of high-end and professional grade components to enable you to experience the sensations of driving a car from the comfort of your home.

At 1.4m long and up to 1.2m wide, the Clubsport is an ultra-compact all-in-one simulator that is ready to race. The base frame easily fits through the door and a single cable powers the entire setup.

We tailor the Clubsport to meet your simulation requirements and budget with a variety of steering wheels, shifter, and handbrake options as well as PC configurations to choose from.

Custom designed from start to finish line

Our custom aluminium chassis provides a rigid solution so you feel every inch of the tarmac. The clean design and black powder coated parts mean it never looks out of place.

In the desire for elegance, adjustability has not been compromised. With a variety of seating positions, steering heights and angles, screen height and pedal placement you can ensure the perfect fit for you.

We have focused on providing the best equipment at the most affordable price. Using professional grade load cell based pedals you can modulate the brakes in the same way as a real car. Focusing on muscle memory for consistency and performance.

The steering system is important on any simulator. We have integrated the Fanatec high-end belt driven and direct drive solutions into the Clubsport simulator to provide a suitable upgrade path as well as a number of steering wheel options.

Built by motorsport professionals

A fusion of genuine motorsport equipment, custom components and professional grade hardware. We take advantage of the best of everything. Seat yourself in one of our FIA approved race seats.

Processing power

A powerful PC is at the heart of our simulators. Using the latest technologies, we provide a smooth experience, even on more demanding titles. Our machines are the perfect multitasking tool, allowing you to stream your race, track competitors, and analyse data in real time.

Quality sound

One of the biggest influences of realism is authentic sound. That's why we've paired the Clubsport simulator with Bose speakers for the best audio. The optional Pro Headset provides 7.1 surround sound in a wireless configuration for unrivalled audio quality - feel the atmosphere.

The right wheel for you

Integrating the Fanatec wheelbase ecosystem into the Clubsport means that you can have a wheel for every occasion. Using a standard quick release system means that not only can you quickly change base, but if you upgrade from the belt driven CSW to the direct drive DD1 the wheels are still plug and play! Both steering wheelbases provide fantastic, realistic feedback. Upgrading to the direct drive base provides the most responsive feedback on the consumer market ensuring you feel every bump in the track as well as how the car loads up and transitions so you can maximise your speed through the corner.

Never miss a shift

Our simulators can be specified with the most realistic shifting available on the market to give you that real driving experience and immersion. Combine one of our H-pattern shifters with our adjustable clutch pedal and you can perfect the art of heel and toe.

Sequential Shifter

Fanatec H-pattern & Sequential Shifter

Rally handbrake

The addition of the Fanatec handbrake is perfect for Rallying, World Rally Cross and Drifting. It teaches a number of skills and is valuable for even the most experienced drivers.

Fanatec Handbrake

Advanced feedback

To enhance the feedback from your Clubsport we offer a tactile feedback add-on that can replicate sensations experienced in a real car such as vibrations through the seat as you run over a rumble strip and the roar of the engine through the rev range and on gear changes.

The tactile feedback uses realtime telemetry data to output engine revs, gear shifts, road bumps, track texture and much more; all of which can be tuned to your desire.

Tactile Transducer Seat Pack

Dashboards

Every bit of information is valuable when in the heat of battle, especially during endurance races. Ensure you hit all the correct shift points and apexes, and plan that perfect pitstop with our dashboard options that sit just behind the steering wheel. With a variety of options, you can see your gears, bright LEDs, speed, fuel level, time delta and much more.

See how you and the competition are performing with our add-on data screen that sits above your main screen and runs alongside the simulator software in realtime.

Software & Compatibility

Using laser-scanned tracks and telemetry from real race cars, simulation software is more than a game. With identical visual markers, reference points and bumps in the track surface, the barrier between simulation and real life is being blurred. You can learn the track even before you arrive for FP1. This, combined with the online presence and growing popularity of eSports, means you can hone your race-craft and enjoy racing other enthusiasts and high level drivers from all over the world.

With a range of simulation titles available, there are thousands of car and track combinations to choose from, from historic race cars all the way to current generation Formula 1 and LMP1 cars.

Use the realtime telemetry logging to analyse your efforts and work out where you can improve against previous laps or even other drivers.

Support

At FPZERO Simulators we want you to extract the most from your Clubsport and as part of this we provide full service and support for your simulator from the very start.

You will find a number of guides and useful tips in our Owner Portal. Learn how to setup a car, how to apply existing car setups, install new content, fine tune the force feedback levels, adjust controls and much more.

For those really tricky problems, our support team will be happy to help you over email or the phone so that you can get up and running and maximise your simulator experience. We have the ability to access your computer remotely to aid with the process.

Customisation

Take your simulator to the next level with our customisation options. Below are a few of the options available. We will work with your ideas to build a customised simulator just for you.

- Feel like a real racing driver with your name and race number in key places, including embroidered onto the seat
- We can apply a livery design to the chassis to match your favourite race car
- Get a colour scheme in your man cave? Why not have your simulator match it!

FPZERO Simulators Clubsport Range

We have a number of options so that we can build the right simulator for you.

Our baseline specification includes the following:

- Clubsport aluminium chassis
- FPZERO FIA race seat
- 43" Super Ultrawide 144hz screen
- Onboard audio by Bose
- Level I performance PC - Intel i5, 8GB RAM 500GB SSD, NVIDIA Gaming Graphics card
- Wireless events keyboard
- Pro 2 pedal set - throttle and brake
- Fanatec belt driven wheelbase
- Choice of GT or Formula wheel
- Software - Personal license - Assetto Corsa, Project Cars 2
- Ready to race, delivered to your door
- Continuous support
- 2 year warranty

Our Advance package includes the following:

- Clubsport aluminium chassis
- FPZERO FIA race seat
- 49" Super Ultrawide 144hz screen
- Onboard audio by Bose
- Level II performance PC - Intel i5, 16GB RAM 500GB SSD, NVIDIA Gaming Graphics card
- Wireless events keyboard
- Pro 3 pedal set - throttle, brake and clutch
- Fanatec Direct Drive wheelbase
- Choice of GT or Formula wheel
- Software - Personal license - Assetto Corsa, iRacing
- Ready to race, delivered to your door
- Continuous support
- 2 year warranty
